Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	1.2.1
Resolution:			
Description			
<p>We use BugTraq properties to relate our commits to Redmine issues. This can cause issues when referencing a revision in a wiki page.</p> <p>When you add a revision reference in a wiki page such as r123, this works fine on the wiki page that contains the reference.</p> <p>If that page is then <i>included</i> on another page the reference will break if the commit message contains a Redmine style markup such as #123.</p> <p>This was tested with both Subversion and Git commits again Redmine 1.2.1.</p> <p>Steps to reproduce:</p> <ol style="list-style-type: none">1. Commit a revision to the repository with an issue reference in it. For example: Closes Issue #123 : Problem with xyz has been resolved.2. On a wiki page place a reference to that revision. For Example: This wiki page is about the changes in this revision r123.3. Now go to another wiki page and use the <i>include</i> macro to include the page in the step above. <p>Notice the r link is now broken.</p>
