- Status changed from Closed to Reopened

You really don't understand the situation. That's not the same as.

If an administrator 'accidentally' deleted an issue, even the administrator couldn't restore it. Redmine takes the record out of database entirely.

Redmine has a flawed user interface design.

1. Delete link in div.contextual is too close to the history log in div#history. User will accidentally click it.
2. The default button in confirmation dialog is set to 'OK' by default. It's a typical example of bad user interface.
3. The worst is the unintended deletion without any chance of recovery.

I do wish you would rethink your decision.

#4 - 2011-07-30 10:48 - Jean-Philippe Lang

In which way it differs from [#6666](#)?

It is a superset of [#6666](#) adding a proposal for UI redesign.

I am closing this issue because the above points are tracked by existing issues.

As for the first one, some improvement was done by [#26662](#) (Redmine 4.0.0) and [#31278](#) (Redmine 5.0.0). The second one is tracked as [#2893](#). The third one is tracked as [#6666](#).
