

Redmine - Feature #9088

REST API to create Project Versions

2011-08-18 18:19 - Alex Last

Target version:	
Resolution:	
Description	
<p>I'm already using the API to retrieve Issues' versions in Redmine Java API. The way Redmine Java API is tested is: a new "test" project is created for each build before all tests are executed. Tests are run against that temporary project. now in order to make the automated testing reliable I also need to create a "Version" for that project, otherwise I can't check whether or not the version returned for an Issue is valid.</p> <p>I could use a pre-defined "test" project to run all auto-tests against, but this is not very nice.</p> <p>on the related note: I'd need to specify "fix_version" and "affected version" when creating/updating Issues. not sure this is implemented in the REST API...</p>

- Status changed from New to Resolved

I see creating project versions works in Redmine 3.2.3 REST API. I will close this
