

Redmine - Defect #9117

Changesets link to issues even without the keyword prefix

2011-08-24 17:23 - Andrew Betts

Status:	New	Start date:	2011-08-24
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	1.2.1
Resolution:			
Description			
<p>In settings, it is possible to configure a keyword that must be prefixed to #number in order to link the changeset to a redmine issue. However, redmine appears to ignore this and links the changeset to any issues that match numbers prefixed with hashes in the text of the comment.</p> <p>For example, if I wrote in a commit message:</p> <p>"Removed the text '#4' from this page (redmine #5)"</p> <p>This will get associated (correctly) with issue 5, and incorrectly with issue 4, which it has nothing to do with. I have found a fix for the association, which is to remove the question mark following the second capturing subgroup on line 117 of app/models/changeset.rb. This makes the keyword mandatory in the scan_comment_for_issue_ids method. However, I can't figure out how to prevent the #4 from becoming a link to issue 4 in the revision history page. This seems to be a very low level thing, and I'm afraid I am not a rails developer so the trail went cold on that one.</p>			

History

#1 - 2011-08-24 17:24 - Andrew Betts

I should have stated that in my test case, I am assuming that the repository settings are configured to require a keyword prefix of 'redmine'.

#2 - 2011-08-24 18:24 - Etienne Massip

- Category set to SCM

Did you remove the asterisk?

#3 - 2011-08-24 18:54 - Andrew Betts

- File Screen_Shot_2011-08-24_at_17.53.22.png added

Yes, my settings look like this.

#4 - 2011-08-25 09:30 - Andrew Betts

Slightly better example: We have multiple tracking systems, so sometimes there are #number references in our commit messages that do not relate to redmine. In this commit message:

redmine 3907, redmine [#2839](#), [#2138](#), helpdesk 1975, helpdesk [#1974](#), [#1503](#)

I would expect redmine to link [#2839](#) and possibly [#2138](#), but not 3907, 1975, 1974 or 1503. In practice it links anything that matches the #number pattern, regardless of its prefix, which means it's linking the helpdesk request IDs to irrelevant redmine issues.
