| Description | | | |
| <p>I noticed this when copying an email into a bug report, it took me a while to figure out why the wiki formatting for the hash sign was not being applied. Apparently some mail clients really like non-breaking spaces.</p> <p>I would suggest translating all such chr(202) into normal spaces chr(32) at a high level.</p> <p>If tabs are also an issue (checking with this), maybe there is just a regex somewhere that needs to be updated.</p> <ol style="list-style-type: none">Regular hash-wiki<ul style="list-style-type: none">## Hash followed by non-breaking space1. Hash followed by a tab character | | | |

History

#1 - 2022-01-06 21:54 - Jonathan Cormier

Just ran into this same issue, copying from an email that contained a non breaking space right before the #.
