

## Redmine - Feature #9306

### Per-tracker issue categories

2011-09-22 15:11 - Lars Erik Gullerud

<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b>	
<p>It would be very useful when defining categories inside a Project if one could select what trackers this category is valid for (similar to the way one selects what trackers are used in a Project).</p> <p>Case example:</p> <p>For our "feature" tracker we only need 3 categories, each assigned to one of three users who will follow up the feature request and do a design for that area. However for "bugs" tracker there are a lot more categories as these are assigned to individual engineers responsible for a given area. Having to see (and be able to select!) all these categories in the "feature" tracker makes our users submit a lot of requests that end up in the wrong place.</p> <p>Of course we could split every single project into sub-projects and have only one tracker (and one set of categories) in each sub-project, however this is a less than optimal workaround...</p>

categories ? mmmh...

I was thinking on a similar/same need, for example, if you do a change that a customer needs to beta-test, think about hardware-specific customers

We could have a system like tags, for example to send notifications to the customers that has X-tagged specific hardware to betatest the new change

+1

It could be made as the plugin below

[https://github.com/nanego/redmine\\_per\\_tracker\\_categories](https://github.com/nanego/redmine_per_tracker_categories)

This is very useful, do not know why redmine does not have this feature.
