Target version:				
Resolution:	Invalid			

Description

I was trying:

source:../show?rev=vc_port

But the ? was transformed %3F

So maybe there is another on how I can specify a branch with the **source** referencing?

History

#1 - 2011-10-06 20:37 - Anonymous

It got transformed so try this

source : "../show?rev=vc_port"

#2 - 2011-10-07 11:38 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Invalid

Please ask your questions in forum, this tracker is for bugs and feature requests only.

BTW, you're not using the source syntax adequately, see [wiki syntax help page](#) (use e.g. [source:/branches/1.2-stable/README.rdoc](#)).

- Status changed from Closed to Reopened

Sorry I wasn't clear enough, but with my git repository it doesn't work the syntax you are suggesting.

For example in my case I would be able to do

source:/branches/vc_port/README.txt

It opens the link but I get the following error:

```
404
```

```
The entry or revision was not found in the repository.
```

```
Back
```

The forum entry for this seems to be [Link to respository file on branch](#).

However, there currently is no solution to link to a file in a specific git branch.

#6 - 2012-10-15 15:06 - Gaspard van Koningsveld

I found the solution to link to a file in a specific branch of the linked git repository:

```
source:"../revisions/branch_name/entry/path/to/the/file"
```

Simply replace branch_name by the name of the specific branch and replace the path of the file at the end.
You **must** put the quotes around the path, otherwise the .. will not be parsed correctly.
