<b>Resolution:</b>	Fixed		
<b>Description</b>			
<p>Feature #2984 requested adding a "Precedence: bulk" header to email notifications to prevent MS Exchange server from triggering out-of-office auto-responder.</p> <p>However, RFC 2076 says this header is "Non-standard controversial, discouraged". It is also not supported by Amazon SES service (emails with the "Precedence" header are rejected).</p> <p>The <a href="#">post referred to</a> in issue #2984 suggests another way of preventing OOF autoresponder: use the "X-Auto-Response-Suppress:OOF" header. I believe this should be used instead of the Precedence header.</p>
