Redmine - Feature #9704

Allow to display a list of issues matching a specific search in a wiki page

Description

It would be useful to be able to display a list of issues matching a specific search in a wiki page, for example when writing release notes. Instead of copying the list of issues into the wiki page, a special syntax would dynamically generate a list of issues matching some criteria (for example, something like version = 1.1 and tracker = Feature), like the ones shown in the roadmap or the versions' pages.
