

Redmine - Defect #9875

Moving parent task leaves subtasks behind

2011-12-27 00:39 - Adam Sneller

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Roadmap	Estimated time:	0.00 hour
Target version:		Affected version:	1.2.2
Resolution:			
Description			
<p>I am having a problem moving parent task between version numbers. Suppose you have a list of issues with parent and subtasks. You then group these issues by version number, to render a hierarchy like so:</p>			
Version 1.0			
Backlog			
Parent task 1			
Parent task 2			
- Subtask 2.1			
- Subtask 2.2			
Parent task 3			
<p>If you then Ctrl-click parent task 2 and change it's version number from <i>Backlog</i> to <i>Version 1.0</i>. Here's what happens:</p>			
Version 1.0			
Parent task 2			
Backlog			
Parent task 1			
Subtask 2.1			
Subtask 2.2			
Parent task 3			
<p>Notice that Subtask 2.1 and Subtask 2.2 have been left behind! I think it makes sense that if you move a Parent task, all subtasks should follow.</p>

I started a discussion regarding this topic in the forums:

<http://www.redmine.org/boards/4/topics/28743>

Also, [#9972](#) is a similar (at least related) issue.

I disagree. I can easily imagine a parent task that, in total, is very big. I know that entire functionality that the task is delivering should be released in "Version 1" but subtasks can be released for testing much earlier in beta releases.
